Education

University of California, Los Angeles

June 2028

BS in Computer Science and Engineering

Coursework: Software Engineering, Data Structures & Algorithms, Operating Systems, Machine Learning

Experience

Robotics Software Engineer Intern

Los Angeles, CA

Stealth Startup

June 2025 – Present

- Trained object detection model to detect specific fruits and integrated inverse kinematics, motion planning, and 3D perception pipelines using ROS/MoveIt for autonomous robotic manipulation and navigation
- Designed data collection, training, and deployment pipelines for diffusion, ACT, pi0-fast, and VLA policy, enabling a mobile-base bimanual robot to autonomously perform door-opening tasks
- Assisted in field testing and sensor data collection and data labeling for legged-robot locomotion

Software Engineer

Jan 2025 – Present

- Working on student sublet feature for 8+ college campuses and over 10k students for unishack.org 📄
- Creating [Meowmate](#) 📄 a swipe-based app that uses ML to make cat adoption fun and engaging
- Developed [BruinWatch](#) 📄 an AI-powered smart search for fast and accurate content from lecture videos
- Collaborated with Chunkr (YCW24) to build a PDF-to-brainrot app using Chunkr, OpenAI, Creatomate

Undergraduate Researcher

Los Angeles, CA

UCLA Robot Intelligence Lab (advised by Prof. Yuchen Cui)

Sep 2024 – Present

- Developing transformation algorithms to integrate eye gaze data (Meta Aria Glasses) into robot manipulation
- Creating intelligent ML models to predict user intent from real-time action for robot manipulation
- Exploring computer vision and robot learning with single-arm, dual-arm, and mobile platform robots
- Applying GenAI to athletic training for automated feedback in collaboration with OpenAI and UCLA IT

Student Researcher

Remote

Inspirit AI

June 2024 – Sep 2024

- Explored ML to build an object detection project for dashboard footage with YOLO, Darknet, Perceptron
- Implemented a facial recognition model for low-resolution images using Support Vector Machines (SVM)

Publications

Diffusion Policy for Coordinated Control of a Nonholonomic Mobile Base and Dual Arms in Door Opening and Passing

September 2025

Intent at a Glance: Gaze-Guided Robotic Manipulation via Foundation Models

May 2025

Tracey Yee Hsin Tay, Xu Yan*, Jonathan Ouyang*, *Daniel Wu*, William Jiang, Jonathan Kao, Yuchen Cui

Projects

[project dave](#) 📄 | **3rd DAIN Butterfly Agent and Fetch AI HM**

April 2025

- Designed an agentic people search system using Fetch.ai AS1 agents to transform user queries into targeted Google Dork strings, retrieving profiles from various public web sources
- Built a outreach pipeline by combining Linkd for LinkedIn profile discovery, SignalHire for email extraction, and Dain agent for sending personalized emails, with Gemini enhancing message context
- Automated LinkedIn & Twitter engagement using Browserbase to send messages, connections, and follows

Hack-A-Food

Feb 2025

- Leveraged Open Food Facts API and TF-IDF-based similarity search to provide barcode-scanned insights on ingredients, nutrients, and environmental impact
- Experimented with RL for food recommendations, successfully implementing a scaled-down recommendation model with 400K+ data points providing recommendations for similar and healthier options

Technical Skills

C++, Python, JS, TS, Go, Java, C, React, Next, Flask, PyTorch, Scikit-Learn, OpenCV, ROS/ROS2, MoveIt, RViz, PyBullet, Unity, Linux, Git, Docker, PostgreSQL, AWS, Onshape, Blender
